

EXERCISE-17

TRIGGER

DEFINITION

A trigger is a statement that is executed automatically by the system as a side effect of a modification to the database. The parts of a trigger are,

- **Trigger statement:** Specifies the DML statements and fires the trigger body. It also specifies the table to which the trigger is associated.
- **Trigger body or trigger action:** It is a PL/SQL block that is executed when the triggering statement is used.
- **Trigger restriction:** Restrictions on the trigger can be achieved

The different uses of triggers are as follows,

- *To generate data automatically*
- *To enforce complex integrity constraints*
- *To customize complex securing authorizations*
- *To maintain the replicate table*
- *To audit data modifications*

TYPES OF TRIGGERS

The various types of triggers are as follows,

- **Before:** It fires the trigger before executing the trigger statement.
- **After:** It fires the trigger after executing the trigger statement
- **For each row:** It specifies that the trigger fires once per row
- **For each statement:** This is the default trigger that is invoked. It specifies that the trigger fires once per statement.

VARIABLES USED IN TRIGGERS

- :new
- :old

These two variables retain the new and old values of the column updated in the database. The values in these variables can be used in the database triggers for data manipulation

SYNTAX

```
create or replace trigger triggername [before/after] {DML statements}  
on [tablename] [for each row/statement]  
begin  
-----
```

```
-----  
-----  
exception  
end;
```

USER DEFINED ERROR MESSAGE

The package "raise_application_error" is used to issue the user defined error messages

Syntax: raise_application_error(error number, 'error message');

The error number can lie between -20000 and -20999.

The error message should be a character string.

TO CREATE THE TABLE 'ITEMPLS'

SQL> create table itempls (ename varchar2(10), eid number(5), salary number(10));
Table created.

SQL> insert into itempls values('xxx',11,10000);
1 row created.

SQL> insert into itempls values('yyy',12,10500);
1 row created.

SQL> insert into itempls values('zzz',13,15500);

yyy           12   10500  
zzz           13   15500
```

TO CREATE A SIMPLE TRIGGER THAT DOES NOT ALLOW INSERT UPDATE AND DELETE OPERATIONS ON THE TABLE

```
SQL> create trigger ittrigg before insert or update or delete on itempls for each row  
2 begin  
3 raise_application_error(-20010,'You cannot do manipulation');  
4 end;

TO DROP THE CREATED TRIGGER

```
SQL> drop trigger ittrigg;
```

Trigger dropped.

TO CREATE A TRIGGER THAT RAISES AN USER DEFINED ERROR MESSAGE AND DOES NOT ALLOW UPDATION AND INSERTION

```
SQL> create trigger ittriggs before insert or update of salary on itempls for each row

Program 1

Write a code in PL/SQL to develop a trigger that enforces referential integrity by preventing the deletion of a parent record if child records exist.

```
CREATE OR REPLACE TRIGGER prevent-parent-delete
BEFORE DELETE ON departments
FOR EACH ROW
DECLARE
    child-count NUMBER;
BEGIN
    SELECT COUNT(*) INTO child-count
    FROM employees

Program 2

Write a code in PL/SQL to create a trigger that checks for duplicate values in a specific column and raises an exception if found.

```
CREATE OR REPLACE TRIGGER check_duplicate_code
BEFORE INSERT OR UPDATE ON products
FOR EACH ROW
DECLARE
    code_count NUMBER;

        WHEN UPDATING THEN 'UPDATE'
        WHEN DELETING THEN 'DELETE'
    END, USER, SYSDATE);
END;
```

Program 7

Write a code in PL/SQL to implement a trigger that automatically calculates and updates a running total column for a table whenever new rows are inserted.

```
CREATE OR REPLACE TRIGGER Update_running_total
BEFORE INSERT ON transactions
FOR EACH ROW
DECLARE
    current_total NUMBER;
BEGIN
    SELECT NVL(SUM(amount), 0) INTO current_total
    FROM transactions;
    :NEW.running_total := current_total + :
    :NEW.amount;
END;
```

Program 8

Write a code in PL/SQL to create a trigger that validates the availability of items before allowing an order to be placed, considering stock levels and pending orders.

```
CREATE OR REPLACE TRIGGER validate_stock.  
BEFORE INSERT ON orders  
FOR EACH ROW  
DECLARE  
    available_stock NUMBER;
